### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

In the specification, page 5, lines 5 & 15 and page 6, line 1, "9," has been replaced with --11-- (see the referred to Japanese document that shows numeral 11 referring to the preheating element and not 9).

In claim 2, line 3, after "angle", --of the inclined receiving surfaces-- has been inserted since there is no antecedence for the term "fixing angle" (see support for this language in the specification on page 10, fourth line from the bottom).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

---

### **DRAWINGS**

Figures 10 and 11 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct

any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

Since the structure of the folding mechanism recited in claims 1 and 5 is directly tied and refers to the machine and mechanisms previously described in these claims, the claims have been considered as encompassing those mechanisms and the folding mechanism being part of a "filling and packaging machine" having the film folding mechanism, a pair of vertically sealing rolls and laterally sealing rolls.

The prior art does not show a folding mechanism that is a part of such a packaging machine and which folding mechanism comprising an inner guide member on the inner surfaces of the two fold film, left and right preheating block members which are disposed on the side of outer surfaces of the film via clearances of a predetermined width left between the guide members and the blocks so that the preheating block members extend in the widthwise direction of the film, and which blocks have inclined (claim 1) or arcuate (claim 5) receiving surfaces so that the clearances between the film and preheating block members at an upstream side with respect to the film transfer direction is larger than the clearance between the film and preheating block members at a downstream side with respect to the same direction and heaters provided in the interior of the preheating block members.
